

Planning ahead for a possible future REACH authorization dossier for Cd, CdO (and other cadmium compounds).

May 4th, 2017 in Brussels

This workshop is jointly organized by the “Cadmium REACH consortium” and “Eurometaux” and will be held in Brussels. Venue will be communicated in May.

Preliminary agenda

Session ONE: WHAT?

Identify operations which qualify as a USE under REACH, and which may therefore need to be authorized.

Session TWO: HOW?

Become familiar with the two routes of authorization:

- ***Which one is the most likely for cadmium and compounds?***
- ***What are the building blocks of the authorization dossier?***
- ***What should you prepare today to build a strong application?***

Session THREE: WHO?

Identify which entity in the supply chain is best positioned to apply for an authorization FOR YOUR USE?

- ***Downstream Users, on their own or jointly?***
- ***Suppliers, on their own or jointly, to the benefit of Downstream Users in their supply chain?***
- ***Are there other options?***

Review the options available and make the right decision.

Session FOUR: WHEN?

What time schedule should you have in mind? Which requirements will be the most time consuming, or will be the most critical to achieve a good quality outcome?

Please register with amutombo@zinc.org on or before April 14th 2017.
